Charakteristik

Veneers from the same flitch are book-matched. Each pair of veneer sheets is arranged like the pages of an open book, creating a mirrored effect. A symmetrical appearance is only achieved when an even number of sheets is used. Edge cuts are possible. Color variations may be highlighted during lacquering. Suitable for small wall and ceiling claddings with consistent panel widths. Intended for clients who value a balanced and natural veneer appearance.

Attributes

- Symmetrical appearance
- Balanced veneer appearance

Type of grading

Suitable project size

Continuous areas up to 30 m²
