Veneer 1

Veneer 2

Veneer 3

## Charakteristik

Veneers from different flitches and logs are combined. Harmonious colors and the slightly curved grain of half-rift veneers create a balanced and lively appearance. By selectively removing extreme colors and grain features, a more uniform overall look is achieved. Individual panels may show slight differences in color and structure. Particularly suitable for large wall and ceiling surfaces with higher aesthetic requirements while keeping waste to a minimum

## Attributes

- Lively appearance
- Sustainable

## Type of grading

## Suitable project size

Continuous areas up to 250 m<sup>2</sup>
