Charakteristik

Veneers from the same flitch are slip-matched. Consistent leaf widths create a harmonious appearance with minimal waste. Slight variations in grain pattern, color, or leaf width are retained. Partial crown-cut (cathedral) grain may appear at the edges. Ideal for small wall or ceiling areas, such as cabinet fronts, and less suitable for large surfaces.

Attributes

- Decorative grain
- Visible repeat pattern

Type of grading

Suitable project size

Continuous areas up to 30 m²
